

Printing Workflow

Order Processing & Epson SureColor S60600L Operation

This document covers the full printing workflow at Keith Merrick, from file preparation and sending to the correct printer, through order status update and final cutting. Follow all steps in sequence for each production run.

■ Printers: Epson SureColor S60600L (x2) | surecolor = RIGHT printer | surecolor2 = LEFT printer

1. Sending the File to the Printer

Prepare and route the correct file from the computer to the appropriate SureColor printer.

- 1 On the computer, move the desired file from the **Portraits** folder to the **Portraits to Print** folder.
- 2 Open **File Manager** on the left side. Click **Refresh**, then click the desired file and click **Open**. The file will appear in the sidebar on the far left.
- 3 Drag the file that just opened — confirm it is the correct file — to the **top-middle-left** or **top-middle-right** of the screen:
 - Top-middle-left → **left** printer (surecolor2)
 - Top-middle-right → **right** printer (surecolor)When the file opens in a separate tab, click **Print**.

■ Always verify the file name before dragging to the print queue. Sending the wrong file will waste media and ink.

2. Updating Order Status in KMSignalR

After sending the file to print, immediately update the order status on the computer to the left so the order is tracked correctly.

- 4 On the **computer to the left**, open **KMSignalR** and locate the print you just created. Use **Ctrl+F** and search the order number (e.g. 902712).
- 5 Click on the desired order. In the **bottom-right**, go to **Status** and change it to **Printed** (shown in green).

■ Status must be changed to Printed before moving on. Failing to update will cause tracking errors and potential duplicate prints.

3. Cutting

Once the printer has finished and there is enough room to work, cut and sort the prints following the steps below.

- 6 After the printer finishes and there is room to cut, **cut the print** from the roll.
- 7 Set the print on the **table across from the printer**.
- 8 Cut **between the small pictures and the larger picture**, cutting along the edge of the small pictures.
- 9 Set the small pictures to the **left**, then cut across the **red line on the top** (when the print is vertical) of the larger picture.
- 10 When setting pictures down, **stagger them** so they are easy to find and grab.

Quick Reference Checklist

#	Task	Where
1	Move file: Portraits → Portraits to Print	Right computer
2	Open File Manager, refresh, open file	Right computer
3	Drag file to correct screen position & click Print	Right computer
4	Find order in KMSignalR via Ctrl+F (order #)	Left computer
5	Change status to Printed (green)	Left computer — KMSignalR
6	Cut print from roll once finished	Printer
7	Place print on table across from printer	Cutting table
8	Cut between small & large pictures	Cutting table
9	Set small pictures left; cut red line on large	Cutting table
10	Stagger prints for easy handling	Cutting table
