## Order Staging, Label Printing & Dispatch Procedure

This document covers the full shipping workflow at Keith Merrick, from scanning the order barcode and staging the shipment through printing labels, applying them, logging the tracking number, and moving the box to the correct outbound pile. Follow all steps in sequence for each order.

- Two labels are printed per order: a large label for the box and a small label for the paper. Always verify shipping type and portrait type before printing.

### 1. Staging the Order

Begin by scanning the order into the system and marking it as staged for shipment.

- 1 **Scan the barcode** on the order.
- 2 **Right-click** and select **Staging**.
- 3 Check the **Pack All** box.
- 4 Click **OK**, then click **OK** again to confirm.

### 2. Processing the Shipment

With the order staged, proceed to the ship order screen and enter the order details by scanning the barcode again.

- 5 Go to the **bottom of the screen** and click **Ship Order**.
- 6 **Scan the barcode again** — it will auto-populate into the Ship Order field. Confirm the entry.
- 7 Click the **small box in the top right** and **scan the barcode** again to input the order number.
- 8 When the order info appears, **confirm the shipping type and portrait type** are both correct before proceeding.

- **Always verify shipping type and portrait type before printing labels. Printing with incorrect details will require the order to be reprocessed.**

### 3. Printing & Applying Labels

Print the shipping labels and apply them to the correct items immediately.

**9** Press **F10** to print. Two labels will print: one large and one small.

**10** Place the **large label on the box** and the **small label on the paper**.

■ Large label → box | Small label → paper. Do not mix up label placement — apply them immediately after printing.

## 4. Logging Tracking & Dispatching

Log the tracking number by scanning the label just applied to the box, then move the box to the correct outbound pile.

**11** Click the **Tracking # box**, then **scan the barcode on the label** that was just placed on the box to log the tracking number.

**12** Move the box to the **correct outbound pile**.

### Quick Reference Checklist

| #  | Task                                           | Notes                |
|----|------------------------------------------------|----------------------|
| 1  | Scan barcode                                   |                      |
| 2  | Right-click → Staging                          |                      |
| 3  | Check Pack All box                             |                      |
| 4  | Click OK → OK                                  | Confirm twice        |
| 5  | Click Ship Order (bottom of screen)            |                      |
| 6  | Scan barcode → auto-populates Ship Order field | Confirm entry        |
| 7  | Click small box (top right) → scan barcode     | Inputs order number  |
| 8  | Verify shipping type & portrait type           | Do not skip          |
| 9  | Press F10 to print two labels                  | Large + small        |
| 10 | Large label → box   Small label → paper        | Apply immediately    |
| 11 | Click Tracking # box → scan label on box       | Logs tracking number |
| 12 | Move box to correct outbound pile              |                      |
